

# RSE261 Dual Sonic Exciter

The RSE261 Dual Sonic Exciter is a two channel frequency compensation device designed to add life and animation to your sound. For recording applications, the RSE261 is essential to perfect a final mixdown. DJs use the unit for the incredible "thumping" bottom end that is enhanced, as well as the crystal clear high end. And the RSE261 is used by those in live sound reinforcement situations to deliver the final touches for the ideal live mix.

## FEATURES:

- Restores signal's clarity and definition
- Automatic sound separation
- Precise control over low frequencies (bottom)
- Individual Definition and Bottom controls for right and left channels
- 1/4" and RCA inputs and outputs

## WHAT IS A SONIC EXCITER?

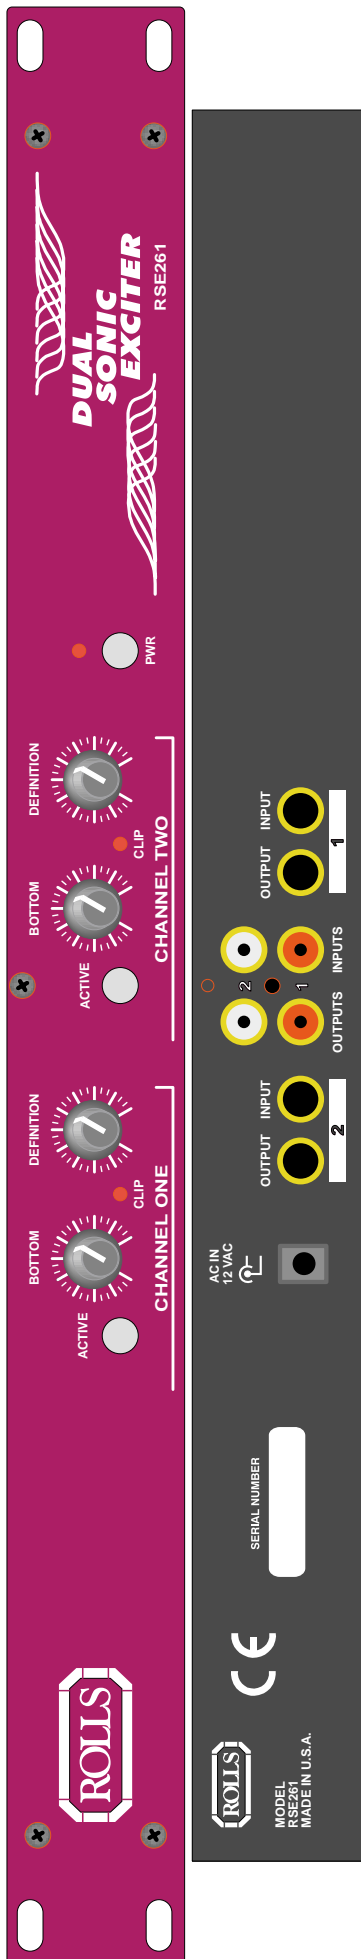

The human ear can detect a frequency range of roughly 20Hz to 20kHz. However, the frequency response that a normal speaker can effectively reproduce is much, much less. Additionally, speakers add distortion and phase changes that make the sound quite different from that of the original material.

A sonic exciter restores clarity and presence to the processed signal by correcting phase changes and harmonic structure differences. In other words, it puts the components of the sound back where they belong.

All of this magic is done by the use of all-pass filtering, frequency compensated gain adjustment, and compensated frequency domain delay. What this means to you is the elements of your sound are fanned out like a deck of cards, making each sound more audible and distinct, reducing the need for high volume and radical equalizer adjustment.

## SPECIFICATIONS

Frequency Response	20 Hz - 40 kHz
Input Impedance	10K $\Omega$ balanced/unbalanced
Output Impedance	100 $\Omega$ balanced/unbalanced
THD + Noise	<0.07% typical
Noise Floor	-78 dB
Indicators	Power LED 2: Clip LEDs
Input/Output jacks	1/4" balanced RCA unbalanced
Dimensions	1.75" X 2.5" X 19"
Weight	3 lbs.
Power	12VAC 500mA

5968 South 350 West, Salt Lake City, UT, 84107
